

# SECRET SERVER ADD-ON: UNIX PROTECTION

## PROTECT YOUR UNIX ENDPOINTS

### OVERVIEW

More organizations are leveraging the power of Unix-based endpoints for a number of purposes. Largely companies turn to Unix for their development purposes, as the platform is free and quickly becoming the developer's operating system of choice.

As such, it's becoming even more vital for IT and Security departments to ensure that these endpoints are being protected, and that privileged access is being controlled.

Thycotic has numerous high-profile clients, and their product has proven to be a mature enterprise class Privileged Management solution.

### SSH KEY MANAGEMENT

SSH Keys are largely left unprotected beyond a simple passphrase.

With Secret Server you can:

- Generate new SSH Key Pairs
- Store your SSH Keys in an encrypted vault
- Rotate your SSH Keys on all of your endpoints that use keys for authentication
- Audit the ownership and use of all keys across your organization

### PRIVILEGE MANAGER FOR UNIX

Enforce Least Privilege Policy on your Unix/Linux root admin accounts!

This feature, geared towards Unix SUPM (Super User Privilege Management), enables Secret Server admins to create command whitelists for limiting what privileged accounts can do on Unix endpoints.

Least Privilege Policy is ensuring that people only have the minimum necessary tools to perform their jobs.

With Privilege Manager for Unix, you can still give admins powerful access to Unix machines without giving them total control over the endpoint. In conjunction with our Session Monitoring add-on, you gain granular control over those endpoints.

### AVAILABLE FOR PURCHASE WITH THE FOLLOWING LICENSES:

- Secret Server Professional
- Secret Server Premium

### PRICING STRUCTURE:

- Priced per protected secret

# OTHER SECRET SERVER ADD-ONS

## SERVICE ACCOUNT MANAGEMENT

Never lose track of service accounts or application pools again.

- Instantly discover service accounts on the entire network.
- Rotate service account passwords without breaking dependencies.

## SECRET WORKFLOW

Secret Workflow allows you to set up Checkout, Request Access, Ticket System Integration, and DoubleLock on your secrets that require an extra level of security control.

## SESSION MONITORING

Satisfy your audit and compliance requirements with live monitoring and recordings of connections to your critical infrastructure.

Session Monitoring comes with over the shoulder viewing and playback of recorded sessions.

## DISCOVERY AUTOMATION

Setup automation rules to discover, take over, and control privileged accounts as they're added to your network.

## ADVANCED SCRIPTING

This add-on allows you to create hooks in Secret Server to extend existing functionality. Write powershell scripts directly within Secret Server.

## DISASTER RECOVERY

With High Availability and Geo-Replication, ensure your instance of Secret Server is always available and recoverable.

## INTEGRATIONS

Secret Server has a number of integrations available. Connect Secret Server to your CRM, Ticket System, SSO Platform, SIEM Tool, SAP system, or HSM.

## MAINFRAME INTEGRATION

Secret Server can help your mainframe administrators protect your IBM z/OS mainframes with TSO/RACF Integration. Protect your privileged accounts and control privileged access to your mainframes

## FIPS COMPLIANCE

To accommodate federal government departments and private industries needing to achieve the Federal Information Processing Standard, you can enable Secret Server's FIPS 140-2 compliant algorithm.

## UNIX PROTECTION

Protect your Unix endpoints with:

- Privilege Manager for Unix
- SSH Key Management

With command whitelisting and SSH Key rotation, you can ensure your Unix endpoints are completely protected.

## SECRET SERVER SYSTEM REQUIREMENTS

- Microsoft Windows Server 2008 R2 +
- Microsoft .NET Framework 4.5.1
- IIS / ASP.NET
- Microsoft SQL Server 2008 +

## PRICING STRUCTURE

- |                |   |
|----------------|---|
| <b>Edition</b> | Choose your feature set. (one time cost)                        |
| <b>Users</b>   | Each person that needs access to Secret Server. (one time cost) |
| <b>Support</b> | Tech support + all new releases. (annual cost)                  |
